

CORNER BYTES

MONTHLY CHALLENGE

Sept 2026

Scenario (SharePoint + Power Automate)

A SharePoint list called Requests has:

- Title (text)
- RequestedBy (Person)
- Status (Choice: New / In Review / Approved / Rejected)

When a request is **Approved**, the person in RequestedBy should get an email that includes a **link to the SharePoint item**.

The flow must **not** run for every other edit (title changes, comments, Status = In Review, etc.).

Answers

A Requests list should email the person in RequestedBy (with a **link to the item**) when Status becomes **Approved** — and the flow should **not** run on every other edit.

Answer the questions below:

What trigger should be used?

- Either of the following SharePoint Triggers will suffice: **When an Item is created or modified** or **When an Item or File is modified**.

Corner Bytes are monthly challenges created by members of the Huntsville M365 UG admins and are meant to be a fun way to learn as a community. All challenges put forth have been successfully tested with Best Practices in mind. Depending on challenge, there might be more than one “right” way to accomplish the goal and judging of submissions will take this into account as. Successful entries are awarded based on first received.

How you stop it from running on every edit?

- Add a trigger condition so the flow only starts if the Status is Approved
